Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-30 are rejected under U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-30 consist solely of capturing information simply manipulates abstract ideas without practical application in the technological arts. The language of the claims 1-30 raises a question as to whether the claimed method is directed merely to an abstract idea that is not tied to a technological art, environment, or machine which would result in a practical application producing a concrete, useful, and tangible result to form the basis of statutory subject matter under 35 USC 101. There is no useful result or output is shown. Even though the preamble discloses, "computing" the body of the claim does not discloses the advantage of computing.

To expedite a complete examination of the instant application the claims rejection under 35 U.S. C. 101 (non-statutory) above are further rejection as set of forth below in anticipation of application amending these claims to place them within the four statutory categories of invention.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Klimko et al.(US 2004/0122550 A1)

Regarding claims 1-30, Klimko discloses that a system, method and a computer program product for developing a set of modeling of welds. With weld option of intermittent fillet, joint length, weld type, a CAD drawing, and other setting options in Fig. 8 - Fig. 13. In addition, Klimko discloses that a database for storing weld information and processing unit couple to database in [0008]. However, Klimko does not specifically disclose continuous path and sub-path. However, it is well known in the art for have a continuous path to make connect the different edge and face and it is well known that each face have sub path.

Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to analyze the modified item as a function of a set of established weld guidelines.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
